DEKLARACJA WŁAŚCIWOŚCI UŻYTKOWYCH

DoP 0334
dla kotwa sworzniowa fischer FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR (Kotwy metalowe do stosowania w betonie) PL

1. Niepowtarzalny kod identyfikacyjny typu wyrobu: **DoP 0334**

2. Zamierzone zastosowanie: **Mocowanie w betonie zarysowanym lub niezarysowanym, zobacz załącznik, w szczególności aneksy B1 - B4.**

3. Producent: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Niemcy**

4. Upoważniony przedstawiciel: **–**

5. System(-y) oceny i weryfikacji stałości właściwości użytkowych: **1**

6. Europejski dokument oceny: **EAD 330232-01-0601, Edition 05/2021**
   Europejska ocena techniczna: **ETA-19/0520; 2023-05-24**
   Jednostka ds. oceny technicznej: **DIBt- Deutsches Institut für Bautechnik**
   Jednostka lub jednostki notyfikowane: **2873 TU Darmstadt**

7. Deklarowane właściwości użytkowe:

Wytrzymałość mechaniczna i stabilność osadzenia (BWR 1)

Nośność charakterystyczna na wyrywanie (nośności statyczne i quasi-statyczne) Metoda A:
Nośność do uszkodzenia stali: Aneksy C1
Nośność na wyrywanie: Aneksy C1
Nośność do wyrwania stożka betonu: Aneksy C1
Solidność: Aneksy C1
Minimalne odstępy osiowe i krawędziowe: Aneksy C5, C6
Odległość od krawędzi zapobiegająca pękaniu pod obciążeniem: Aneksy C1

Nośność charakterystyczna na ścinanie (nośności statyczne i quasi-statyczne), metoda A:
Nośność do uszkodzenia stali (obciążenie ścinające): Aneksy C2
Nośność do uszkodzenia wyważenia: Aneksy C2

Charakterystyczna wytrzymałość dla uproszczonego projektu:
Metoda B: NPD
Metoda C: NPD

Przesunięcia:
Przemieszczenia przy obciążeniu statycznym i quasi-statycznym: Aneksy C9

Nośność charakterystyczna i przemieszczenia w warunkach sejsmicznych dla kategorii C1 i C2:
Nośność na wyrywanie, kategoria C1: Aneks C7
Nośność na wyrywanie, kategoria C2: Aneksy C8, C9
Nośność na ścinanie, kategoria C1: Aneks C7
Nośność na ścinanie, kategoria C2: Aneksy C8, C9
Współczynnik szczeliny pierścieniowej: Aneksy C7, C8

Ochrona przeciwpożarowa (BWR 2)
Reakcja na ogień: Klasy (A1)
Odporność na działanie ognia:
Odporność ogniowa do zniszczenia stali (obciążenie rozciągające): Aneks C3
Odporność ogniowa na wyrywanie (obciążenie rozciągające): Aneks C3
Odporność ogniowa na zniszczenie stali (obciążenie ścinające): Aneksy C3, C4

Trwałość:
Trwałość: Aneksy A4, B1

8. Odpowiednia dokumentacja techniczna lub specjalna dokumentacja techniczna: **–**

Właściwości użytkowe określonego powyżej wyrobu są zgodne z zestawem deklarowanych właściwości użytkowych. Niniejsza deklaracja właściwości użytkowych wydana zostaje zgodnie z rozporządzeniem (UE) nr 305/2011 na wyłączną odpowiedzialność producenta określonego powyżej.

W imieniu producenta podpisał(-a):

Dr.-Ing. Oliver Geibig, Dyrektor Zarządzający ds. Jednostek Biznesowych i Inżynierii

Jürgen Grün, Dyrektor Zarządzający ds. Chemii i Jakości

Tumlingen, 2023-05-31

Niniejsza Deklaracja Właściwości Użytkowych została przygotowana w różnych językach. W razie wątpliwości w interpretacji, wersja angielska jest zawsze miarodajna.

Załącznik zawiera dobrowolne i uzupełniające informacje w języku angielskim (neutralne językowo), a wykraczające poza wymagania prawne.

Specific Part

1 Technical description of the product

The fischer Bolt Anchor FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR is an anchor made of galvanized steel (FAZ II Plus), stainless steel (FAZ II Plus R) or high corrosion resistant steel (FAZ II Plus HCR) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading), Method A	See Annex C1, C5 and C6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C2
Displacements	See Annex C9
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C7 to C9

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C3 and C4

3.3 Aspects of Durability

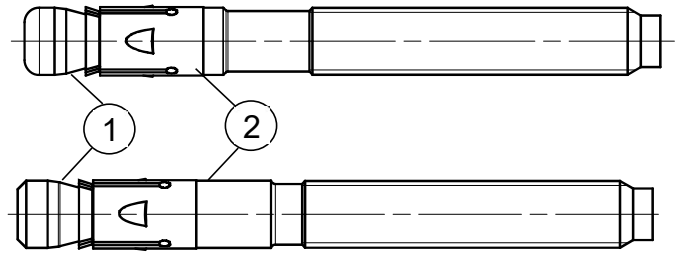
Essential characteristic	Performance
Durability	See Annex B1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

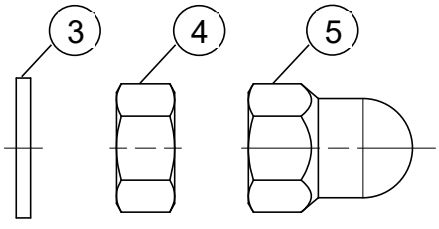
In accordance with the European Assessment Document EAD 330232-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

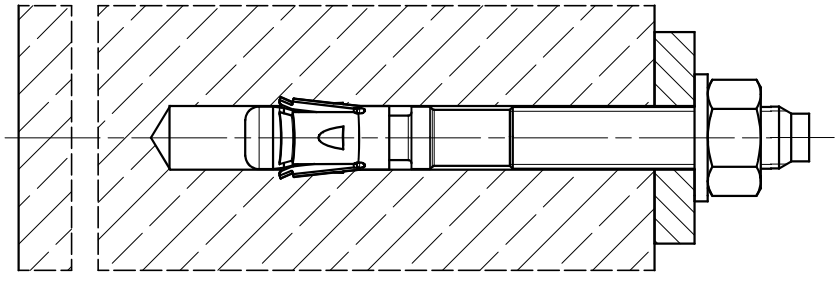
Cone bolt manufactured by cold - forming:

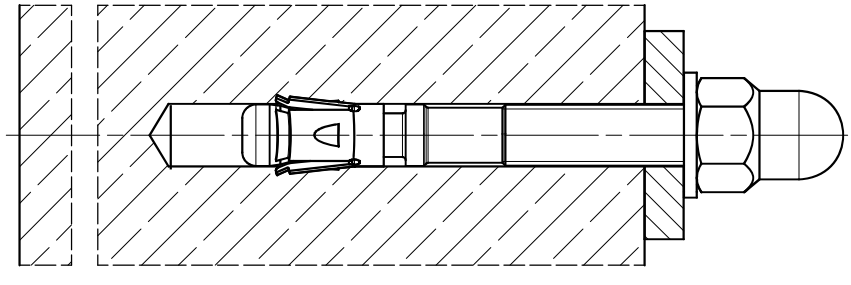


Cone bolt manufactured by turning:



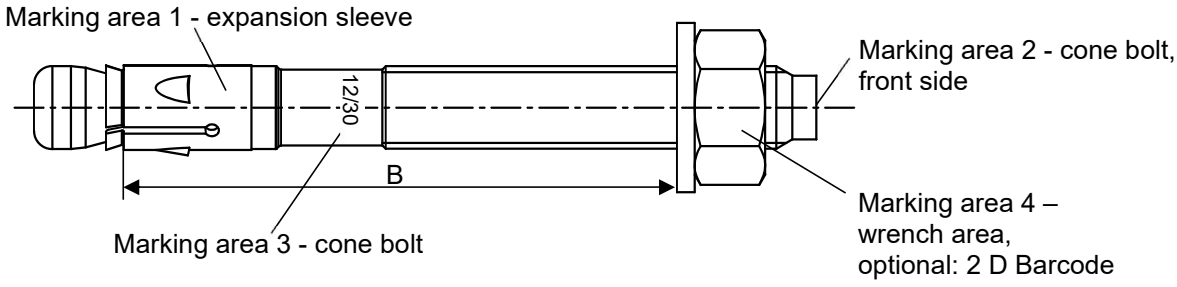
① Expansion sleeve
② Cone bolt (cold – formed or turned)
③ Washer
④ Hexagon nut
⑤ fischer FAZ II Plus dome nut





(Figure not to scale)

Product marking and letter-code:



Product marking, example: FAZ II + 12/30 R

Brand | type of fastener placed at marking area 1 or 3

Thread size / max. thickness of the fixture (t_{fix})
identification R or HCR placed at marking area 1 or 3

FAZ II Plus: carbon steel, galvanised
FAZ II Plus R: stainless steel
FAZ II Plus HCR: high corrosion resistant steel

Table A2.1: Letter - code at marking area 2:

Specifications of intended use

Fastenings subject to:

Size		FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR						
		M6	**M8**	**M10**	**M12**	**M16**	**M20**	**M24**
Hammer drilling with standard drill bit 					✓			
Hammer drilling with hollow drill bit with automatic cleaning 		- [1]			✓			
Diamond drilling 		- [1]	✓	(for non seismic applications only)				
Static and quasi-static loads								
Cracked and uncracked concrete					✓			
Fire exposure								
Seismic performance category	C1	- [1]				✓		
	C2	- [1]				✓		

[1] No performance assessed

Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked or uncracked) according to EN 206-1:2013+A2:2021
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR)
- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class
  - CRC III: for FAZ II Plus R
  - CRC V: for FAZ II Plus HCR

Design:

- Fastenings are to be designed under the responsibility of an engineer experienced in fastenings and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.)
- Fastenings in stand-off installation or with a grout layer under seismic action are not covered
- In case of seismic applications the fastener shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 055:2018

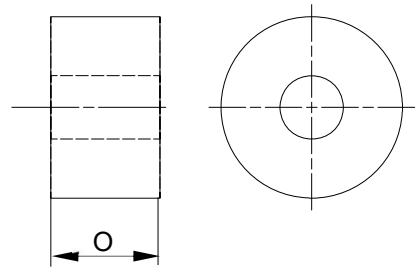
Table B2.1: Installation parameters

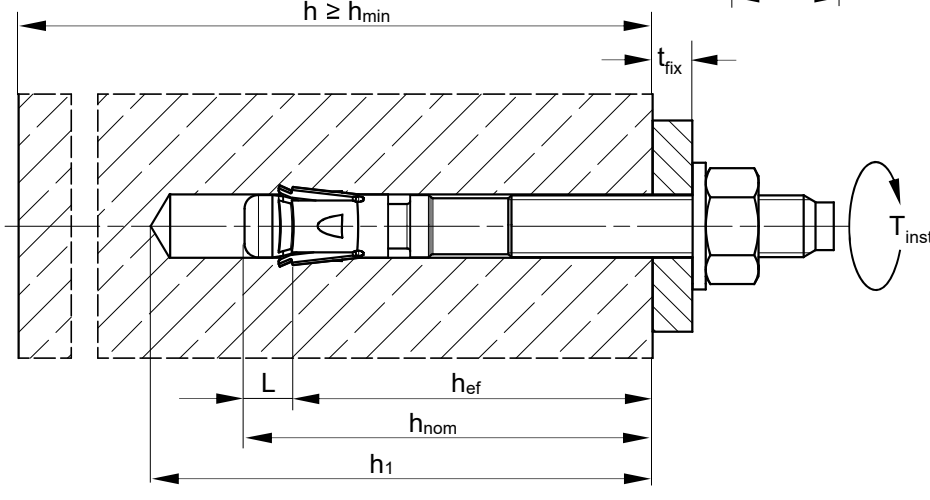
Size			FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR						
			M6	**M8**	**M10**	**M12**	**M16**	**M20**	**M24**
Nominal drill hole diameter	d_0 =	[mm]	6	8	10	12	16	20	24
Maximum bit diameter with hammer or hollow drilling	$d_{cut,max}$	[mm]	6,40	8,45	10,45	12,5	16,5	20,55	24,55
Maximum bit diameter with diamond drilling	$d_{cut,max}$	[mm]	- [1]	8,15	10,45	12,25	16,45	20,50	24,40
Effective embedment depth	$h_{ef} \geq$	[mm]	40-80	35-90	40-100	50-125	65-160	100-180	125
Length from h_{ef} to end of cone bolt	L	[mm]	6,5	9,5	11,5	13,5	17,5	20,0	23,5
Overall fastener embedment depth in the concrete	$h_{nom} \geq$	[mm]	h_{ef} + L						
Depth of drill hole to deepest point	h_1 [2] $\geq$	[mm]	h_{nom} + 3			h_{nom} + 5		h_{nom} + 10	
Diameter of clearance hole in the fixture	$d_f \leq$	[mm]	7	9	12	14	18	22	26
Required setting torque	T_{inst} =	[Nm]	8	20	45	60	110	200	270
Excess length after hammering-in the cone bolt (for fischer dome nut applications according to Annex B4)	O =	[mm]	- [1]		12	16	20	- [1]	

[1] Not part of the assessment

[2] For the application without drill hole cleaning: $h_{1,nc} = h_1 + 15$ mm

Setting gauge FAZ II Plus SL-H
for fastener with fischer FAZ II Plus dome nut:





h_{ef} = Effective embedment depth
h_{nom} = Overall fastener embedment depth in the concrete
h_1 = Depth of drill hole to deepest point
$h_{1,nc}$ = Depth of drill hole to deepest point without cleaning
L = Length from h_{ef} to end of cone bolt

h = Thickness of the concrete member
h_{min} = Minimum thickness of concrete member
t_{fix} = Thickness of the fixture
O = Length of setting gauge
T_{inst} = Required setting torque

Installation instructions:

- Fastener installation carried out by appropriately qualified personnel according to the design drawings and under the supervision of the person responsible for technical matters on the site
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener Exception: fischer FAZ II Plus dome nut
- Hammer, hollow or diamond drilling according to Annex B1 + B2
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

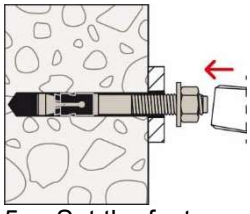
Installation instructions: Drilling and cleaning the hole

Types of drills and cleaning

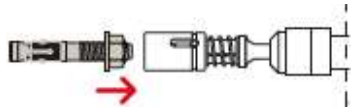
Hammer drill (e.g. fischer Quattric II) with cleaning		 1: Drill the hole	 2: Clean the hole	Continue with step 5	
Hammer drill (e.g. fischer Quattric II) without cleaning		 1: Drill the hole	 2: When $h_{1,nc}$ is reached: Pull out drill 3 x	 Cleaning not necessary; Continue with step 5	
Hollow drill (e.g. fischer FHD)		 1: Drill the hole with automatic cleaning (e.g. fischer FVC)	 Cleaning obsolete	Continue with step 5	
Diamond drill, for non seismic applications only		 1: Drill the hole	 2: Break the drill core and remove it	 3: Flush the drill hole, until clear water emerges from the drill hole	 4: Clean the hole

Installation instructions: Installation of the fastener

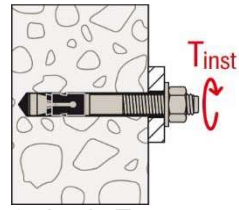
HEXAGON NUT:



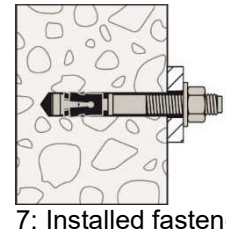
5.a: Set the fastener
e.g. with hammer



5.b: Set the fastener
e.g. fischer FA-ST II



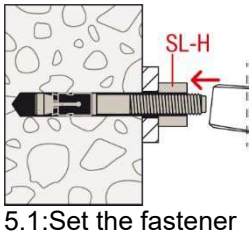
6: Apply T_{inst}



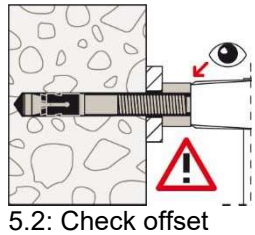
7: Installed fastener

fischer FAZ II Plus DOME NUT:

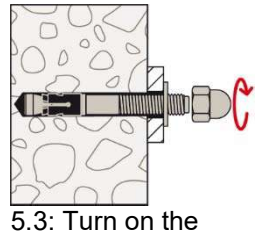
Option 1: Push through installation with setting gauge SL-H:



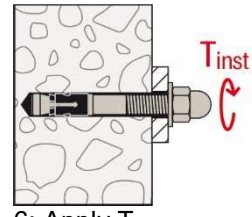
5.1:Set the fastener through the setting gauge and fixture



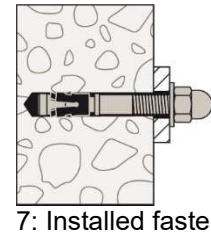
5.2: Check offset



5.3: Turn on the fischer FAZ II Plus dome nut

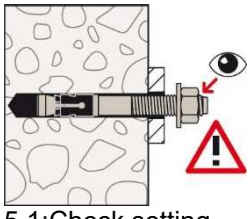


6: Apply T_{inst}

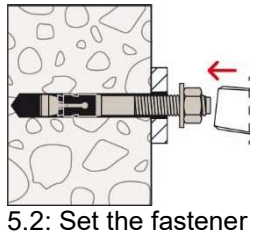


7: Installed fastener

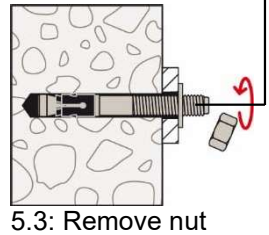
Option 2: Push through installation with hexagon nut:



5.1:Check setting position: Visible one turn of a thread



5.2: Set the fastener

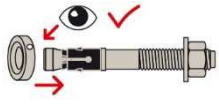


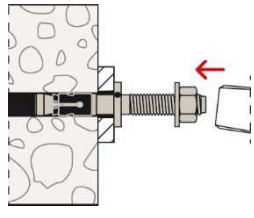
5.3: Remove nut

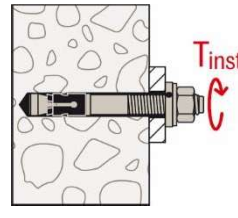
fischer Filling conical washer FFD optional for seismic C2 application or minimising the annular gap:

Optional

The gap between bolt and fixture may be filled with mortar (compressive strength ≥ 50 N/mm² e.g. fischer FIS SB) after last step (for eliminating the annular gap). The FFD is additional to the standard washer. The thickness of the FFD must be considered for definition of t_{fix}. Countersunk of the FFD in direction to the anchor plate. Installation with hexagon nut or dome nut is permitted.







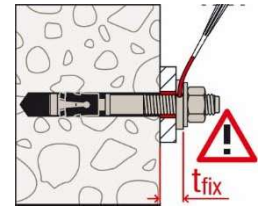


Table C1.1: Characteristic values of **tension** resistance under static and quasi-static action

Size				FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR

Minimum thickness of concrete member	h_{min}		80			100	140	160	200
Thickness of concrete member	h ≥		max. {h_{min}; 1,5 · h_{ef}; h_1 + 25}				max. {h_{min}; 1,5 · h_{ef}; h_1 + 30}		
Minimum splitting area									
Uncracked concrete	$A_{sp,req}$	[·1000 mm²]	5,1	18	37	54	67	100	117,5
Cracked concrete			1,5	12	27	40	50	77	87,5

[1)] If borehole cleaning is omitted, h_1 is replaced by $h_{1,nc}$

Table C5.2: Minimum spacing and minimum edge distances - calculated values for **cracked concrete with one edge** (c_2 and $c_3 \geq 1{,}5\ c_1$)

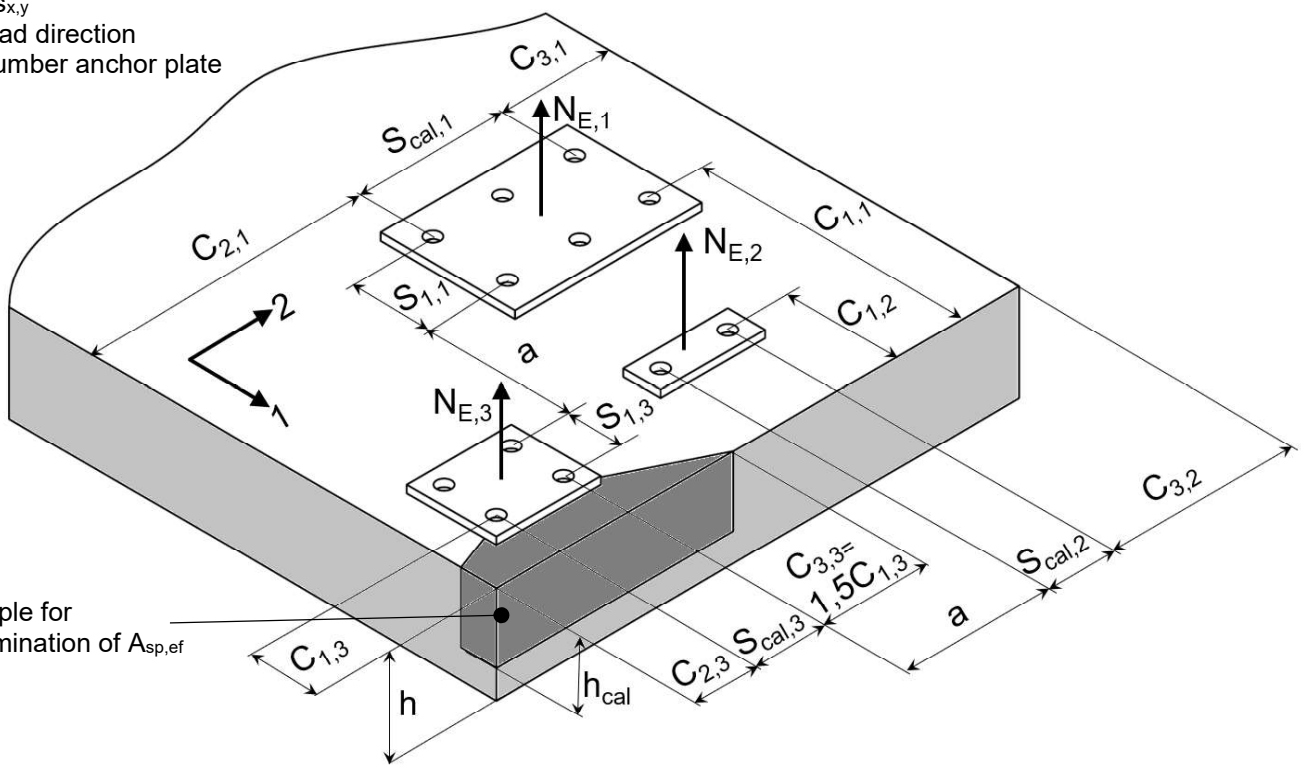
Type of anchor / size		FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR										
		M6	**M8**		**M10**		**M12**		**M16**		**M20**	**M24**
Effective anchorage depth	$h_{ef} \geq$ [mm]	40	35	45	40	60	50	70	65	85	100	125
Minimum thickness of concrete member	$h^{1)} \geq$ [mm]	80		85	80	120	100	140	140	180	160	200
Minimum spacing	s_{min} [mm]	35			40		50		65		95	100
	for c ≥ [mm]	40			100	65	120	80	100	75	130	115
Minimum edge distance	c_{min} [mm]	40			60	45	70	55	65		85	100
	for s ≥ [mm]	35			160	90	190	125	165	85	230	140

[1)] thickness of concrete member has to be increased by 15 mm, if borehole cleaning is omitted

Determination of $A_{sp,ef}$ for each existing free edge

Splitting failure applied for minimum edge distance and spacing in depending on h_{ef}

Definition Index:
cal = calculatory
e.g.: $s_{x,y}$
x = load direction
y = number anchor plate



Example for determination of $A_{sp,ef}$

Example for different anchor plates: For considering all free edges the direction 1 and 2 must be swaped.

General formulation for each free edge: $A_{sp,ef} = (c_2 + s_{cal} + c_3) \cdot h_{cal} \geq (^n/_2) \cdot A_{sp,req}$
with:
Edge distance c_1: $c_{min} \leq c_1$
Edge distance c_2: $c_{min} \leq c_2 \leq 1{,}5 \cdot c_1$
Edge distance c_3: $c_{min} \leq c_3 \leq 1{,}5 \cdot c_1$
Calculation spacing, distance between outer anchors s_{cal}: $s_{min} \leq s_{cal} \leq 3{,}0 \cdot c_1$
Distance between group of anchors a: For $a \geq 3{,}0\ c_1$ no influence between the anchor groups is taken into account.
Number of anchors n of an anchor plate as well close and parallel to the edge
Effective member thickness h_{cal}: $h_{min} \leq h$; $h_{cal} \leq h$; $h_{cal} \leq (h_{ef} + 1{,}5 \cdot c_1)$
c_1, c_2, c_3, h and s_{cal} have to be set in way that the requirement is fullfiled

For the calculation of minimum spacing and minimum edge distance of fasteners in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

$$\mathbf{A_{sp,req} < A_{sp,ef}}$$

$A_{sp,req}$ = required splitting area (according to Annex C 5)
$A_{sp,ef}$ = effective splitting area

(Figure not to scale)
